SUMMARY

Mathematics graduate and Google-certified data analyst with 1,500+ hours of analytical instruction experience transitioning into data analytics. Built a 12-project portfolio spanning supply chain forecasting with Oracle stored procedures, machine learning churn prediction with SHAP explainability, e-commerce revenue analysis, A/B testing, cohort retention, financial risk modeling, and automated ETL pipelines. Proven ability to diagnose complex problems, communicate findings to non-technical audiences, and deliver end-to-end analytical solutions across SQL, Excel, Tableau, and Power BI. Seeking a data analyst role where quantitative rigor and cross-functional communication drive business decisions.

TECHNICAL SKILLS

SQL & Databases: Oracle SQL, BigQuery, MySQL, SQLite • CTEs, Window Functions, DDL/DML, Stored Procedures, Views

Spreadsheets: Excel (Power Query, Power Pivot, Solver, Dynamic Arrays, DAX), Google Sheets

BI & Visualization: Power BI (DAX, Star Schema, RLS), Tableau, Looker Studio, Data Storytelling

AI Tools: Claude, Claude Code, ChatGPT, Codex, Gemini

Other: Git/GitHub, GitHub Actions, API Integration, ETL Pipelines, A/B Testing, Jupyter Notebooks

PORTFOLIO PROJECTS

Supply Chain Analytics — Oracle SQL · Excel · Power BI — End-to-end solution on 180K orders: Oracle stored procedures with DBMS_SCHEDULER automation, Power Query ETL with five custom M functions, ABC/XYZ classification, ETS and WMA demand forecasting, 6-month MRP simulation, and a 6-page Power BI dashboard with DAX measures and forecast write-back validated with zero variance across 42 rows.

Machine Learning — Customer Churn Prediction — ML pipeline on 7K telecom records: compared 5 classifiers (Logistic Regression, Random Forest, XGBoost, LightGBM, SVM), handled class imbalance, tuned hyperparameters via RandomizedSearchCV, and explained predictions with SHAP. Deployed a 4-page Streamlit app for real-time churn scoring achieving 0.83 AUC and 79% recall.

SQL E-commerce Revenue & Returns Analysis — BigQuery — Analyzed 1M+ order records using CTEs, window functions (ROW_NUMBER, RANK, LAG/LEAD), multi-table joins, and aggregations to surface revenue drivers, return patterns, geographic distribution, and seasonal trends — each section with actionable recommendations.

SQL Data Cleaning & Transformation — MySQL — Cleaned 56K+ Nashville housing records: DDL/DML operations, self-join address population, ROW_NUMBER deduplication, type conversions, whitespace trimming, reusable views, and a stored procedure encapsulating the five-step pipeline.

Excel Sales Dashboard — Superstore Dataset — Power Query ETL pipeline, KPIs with XLOOKUP and SUMIFS, pivot table analysis across 9,994 orders and \$2.3M in sales, and an interactive dashboard with slicers for dynamic filtering by region, category, and segment.

Tableau — Olist Marketplace Ops & CX — Multi-dashboard analysis of 99K+ Brazilian e-commerce orders across 8 tables: KPI cards for delivery and completion metrics, calculated fields, trend charts, histograms, and 3 interactive dashboards published to Tableau Public.

Power BI — CDC Chronic Disease Analytics — Normalized star schema, Power Query ETL, 10 DAX measures including RANKX, DATEADD, and ALLEXCEPT for state rankings, time intelligence, and demographic disparity — interactive dashboards tracking 9 disease topics across 52 U.S. locations.

Python — Financial Portfolio Analysis — Retrieved 10 years of daily market data for 6 assets via yfinance API; computed Sharpe ratio, max drawdown, and VaR; analyzed correlations, performed seasonal decomposition, and built an ARIMA forecast with confidence intervals.

R — A/B Testing & Experimentation — 7-script pipeline on 10K simulated SaaS users: SRM and covariate balance checks, hypothesis tests with confidence intervals, bootstrap and permutation inference, regression adjustment with robust standard errors, and power analysis.

Looker Studio — Cohort Retention Analysis — BigQuery SQL for monthly acquisition cohorts, then an interactive Looker Studio dashboard with retention matrices, revenue curves, channel comparisons, lifecycle segmentation (Active/At-Risk/Churned), and cumulative lifetime value.

API Pipeline — Federal Job Market Analytics — Automated ETL pipeline: USAJobs API with pagination and retry logic, nested JSON flattened into a 23-column SQLite database with upsert deduplication, daily GitHub Actions runs, and a Streamlit dashboard deployed on Community Cloud.

Julius AI — CDC Health Data Exploration — Explored 800K+ CDC rows entirely through natural language prompts: diabetes trends, asthma disparities, physical inactivity vs. cardiovascular mortality ($r=0.72$), mental health gaps, and obesity trends — with a critical tool evaluation.

PROFESSIONAL EXPERIENCE

Math Tutor & Instructor | 2016 – 2025

Mr J's Academy · Wyzant · Blue Train College Prep · Private Clients

Delivered 1,500+ hours of math instruction spanning Algebra through Calculus across private schools, online platforms, and independent clients. Maintained a 4.8-star rating on Wyzant across 91 hours of 1-on-1 sessions. Completed 130 hours of classroom lecturing at Dos Pueblos High School through UCSB's education pre-professional program. Diagnosed individual learning gaps and tailored lesson plans to consistently improve student outcomes.

Assistant Lab Technician | Summers 2017 – 2023, 2025

Escape Communications

Calibrated precision lab instruments, tested and assembled electronic products, and managed inventory tracking through internal software. Developed working proficiency with Excel for data entry, reporting, and basic analysis.

EDUCATION & CERTIFICATIONS

B.A. in Mathematics — University of California, Santa Barbara

Minor: Secondary Mathematics & Science Education • GPA: 3.4

Single Subject Teaching Credential Coursework (Mathematics) — California State University, Long Beach

GPA: 4.0

Google Data Analytics Professional Certificate — Coursera
