

# JONATHAN NADEAU

## Data Analyst

Torrance, CA | (310) 989-2905 | nadeau.jonny@gmail.com | linkedin.com/in/nadeau-jonathan | github.com/nadeaujonny

Portfolio Website: nadeaujonny.github.io

## SUMMARY

Mathematics graduate (UCSB) and Google Data Analytics certified analyst, currently the sole developer on two internal data tools at a defense and telecom electronics manufacturer. Experience spans data extraction and validation from undocumented legacy systems, Python ETL design, cost-optimization analysis, and SQL and BI reporting, backed by 1,500+ hours communicating quantitative findings to non-technical audiences.

## TECHNICAL SKILLS

**SQL & Databases:** Oracle SQL, BigQuery, MySQL, SQLite · CTEs, window functions, stored procedures, DDL/DML

**Python & R:** pandas, NumPy, scikit-learn, Streamlit, pytest, matplotlib · R (tidyverse)

**Spreadsheets & BI:** Excel (Power Query, Power Pivot, DAX, dynamic arrays, Solver), Power BI, Tableau, Looker Studio

**Data Engineering:** ETL pipelines, REST API integration, incremental refresh, data validation, audit logging, Git/GitHub, GitHub Actions

## PROFESSIONAL EXPERIENCE

### Data Analyst Intern | Escape Communications

July 2026 – Present | Torrance, CA

*Sole developer on two internal tools for the engineering and procurement functions of a defense and telecom hardware manufacturer.*

- **Failure Analysis Search Tool:** Reverse-engineered an undocumented legacy Bugzilla instance and extracted a complete 4,038-record hardware failure corpus spanning 2007–2026, with full comment history, via REST API.
- Audited data quality across all records and established that the structured failure-classification fields were unusable as signal (43% structurally unable to carry a value; a second field defaulting in over 80% of cases), redirecting an eight-week dashboard roadmap toward the free-text comment threads where the engineering knowledge lived.
- Built a dependency-free Python extraction pipeline indexing roughly 2,245 PCB reference designators out of free text, hand-validated it prefix by prefix, published a per-category precision table, and shipped a fix eliminating a 68–71% false-positive rate on the worst-performing values.
- Shipped the search application in Streamlit with field search, component-level lookup, TF-IDF similarity, and watermark-based incremental REST refresh, iterating on same-day feedback with the two engineers who own failure analysis.
- **BOM Sourcing & Purchase Planning Tool:** Built an end-to-end Python tool (pandas, Streamlit, pytest, 444 tests) that cleans and validates 300+ line bill-of-materials exports, checks availability and pricing across five distributors via file parsers and live REST APIs, and outputs a cost-minimized, fully auditable purchase plan.
- Live vendor API integration surfaced volume pricing invisible to the prior manual process, cutting a 100-board parts plan from \$129,770 to \$103,774 (roughly \$23,400, or 20%); parametric spec validation caught four genuine documentation defects in production BOM data on its first run, and availability checks flagged 55 at-risk parts ahead of the build rather than during it.
- Wrote the operational documentation for both tools (user guides, runbooks, append-only build and decision logs) and briefed the VP of Engineering in a one-page readout leading with the financial case.

### Mathematics Instructor & Tutor | Mr. J's Academy · Wyzant · Blue Train College Prep · UCSB

Sept 2022 – May 2025 | Torrance & Goleta, CA

- Delivered 1,500+ hours of mathematics instruction spanning Algebra 1 through Calculus and SAT preparation across 17+ recurring clients, maintaining a 4.8-star Wyzant rating and 100% client retention.
- Promoted from middle school tutor to high school lead tutor at Mr. J's Academy with a 50% compensation increase, serving as the staff mathematics specialist across a full student caseload.
- Diagnosed individual learning gaps from assessment results and designed targeted problem sets against each student's curriculum, translating abstract quantitative material for audiences at varying levels of technical depth.

### Lab Technician | Escape Communications

Summers 2017 – 2023, 2025 | Torrance, CA

- Performed QA testing and calibration on power supply units, recording multimeter measurements into Excel trackers built with conditional formatting and logical formulas to automatically flag out-of-tolerance values.
- Tracked component inventory across product lines with low-count alerting, tested completed boards for functional compliance, and assembled hardware units.

## SELECTED PORTFOLIO PROJECTS (15 total at nadeaujonny.github.io)

- **Supply Chain Analytics** (Oracle SQL, Excel, Power BI): 180K orders. Stored procedures with scheduled automation, Power Query ETL, ABC/XYZ classification, ETS and WMA forecasting, a 6-month MRP simulation, and a 6-page star-schema Power BI dashboard. Diagnosed a structural 42.7% on-time delivery rate.
- **Skechers FP&A Model** (Excel): Three-statement model from FY2020–FY2024 10-K filings with Bear/Base/Bull scenarios, sensitivity tables, variance analysis, and a KPI dashboard, all balance and cash-flow checks passing.
- **Customer Churn Prediction** (Python, scikit-learn, Streamlit): Compared five classifiers on 7K records, handled class imbalance, tuned via RandomizedSearchCV, explained predictions with SHAP, and deployed a scoring app reaching 0.83 AUC and 79% recall.

## EDUCATION & CERTIFICATIONS

### B.A. in Mathematics | University of California, Santa Barbara

Sept 2018 – March 2023

GPA 3.40 (Mathematics GPA 3.49) · 4x Dean's Honors · Minor: Secondary Mathematics & Science Education

### Data Science Certificate | UCLA Extension

June 2026 – Dec 2026 (in progress)

Introduction to Data Science · Exploratory Data Analysis & Visualization · Big Data Management · Machine Learning Using Python

### Google Data Analytics Professional Certificate | Coursera

Oct 2025 – Jan 2026

100% average across all nine courses

### Single Subject Mathematics Teaching Credential Coursework | CSU Long Beach

Aug 2024 – Oct 2025

GPA 4.00
